

Fertilizers

At Maverick Energy DMCC, we recognize the vital role that fertilizers play in promoting sustainable agriculture and ensuring food security. With our five decades of global experience in the energy and related sectors, we have emerged as a leading supplier of high-quality fertilizers across Dubai and the GCC region. Our comprehensive range of fertilizer products is designed to meet the diverse nutritional needs of crops, improve soil health, and enhance crop yields.

We are committed to providing innovative and environmentally responsible solutions that support the growth of the agricultural sector while minimizing the environmental impact. Our fertilizer portfolio encompasses a wide range of products, including nitrogen-based, phosphate-based, potash-based, organic, and specialty fertilizers, tailored to meet the specific requirements of various crops and farming practices.

Nitrogen-based Fertilizers

Nitrogen is an essential nutrient for plant growth and development. Our nitrogen-based fertilizers are formulated to provide readily available nitrogen to crops, promoting healthy foliage and vegetative growth. We offer products such as

- Urea: A highly concentrated and cost-effective nitrogen source.
- Ammonium nitrate: A widely used fertilizer that provides a balanced combination of nitrate and ammonium nitrogen.
- Calcium ammonium nitrate (CAN): A versatile fertilizer that offers both nitrogen and calcium for optimal plant nutrition.

Phosphate-based Fertilizers

Phosphorus is crucial for root development, energy transfer, and overall plant health. Our phosphate-based fertilizers are designed to enhance crop yields and improve resistance to environmental stresses. Our product range includes

- Monoammonium phosphate (MAP): A highly soluble and readily available source of phosphorus and nitrogen
- Diammonium phosphate (DAP): A popular fertilizer that provides both phosphorus and nitrogen in a concentrated form.
- Triple superphosphate (TSP): A high-analysis phosphate fertilizer suitable for a wide range of soil types.

Potash-based Fertilizers

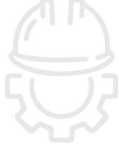

Potassium is essential for water regulation, enzyme activation, and disease resistance in plants. Our potash-based fertilizers are formulated to optimize crop quality and yield. We offer products such as

- Muriate of potash (MOP): A cost-effective and widely used source of potassium.
- Sulfate of potash (SOP): A premium fertilizer that provides both potassium and sulfur for balanced plant nutrition.
- Potassium nitrate: A specialized fertilizer that supplies both potassium and nitrate nitrogen.

Organic and Specialty Fertilizers

In addition to conventional fertilizers, we also offer a range of organic and specialty fertilizers tailored to meet specific agricultural needs. These include

- Organic fertilizers: Derived from natural sources, such as animal manures, composts, and plant-based materials.
- Micronutrient fertilizers: Formulated to provide essential micronutrients like zinc, boron, and iron for optimal plant growth.
- Controlled-release fertilizers: Designed to release nutrients gradually, reducing nutrient loss and environmental impact.

Safety Features

At Maverick Energy DMCC, we prioritize safety in the handling and storage of our fertilizer products. We implement strict safety protocols and adhere to industry best practices, ensuring the well-being of our employees, customers, and the environment.

Supply Chain Logistics

Our extensive global network and strategic partnerships enable us to ensure reliable and efficient delivery of our fertilizer products to agricultural regions across Dubai and the GCC. Our dedicated logistics team oversees the entire supply chain, ensuring timely and secure delivery while maintaining product quality and integrity.

Environmental Considerations

Maverick Energy DMCC is committed to promoting sustainable agricultural practices and minimizing the environmental impact of our operations. We continuously explore opportunities to develop and incorporate environmentally friendly fertilizer solutions. Our products are formulated to optimize nutrient utilization, reducing waste and minimizing the risk of environmental pollution.
